Senior Software Developer

Quality-driven and resourceful software developer with diverse experience delivering best quality software products in line with business / project requirements. Demonstrated excellence in backend as well as front-end web development. Hands on experience with various programming languages, including C# and Angular. Proven history across agile environments while collaborating with business analysis and tech teams to define core requirements, application designs, architecture patterns, and technology strategy. Trusted and admired by the leadership for successful, on-time, and under-budget project deliveries through implementation of Agile practices and regular sprint sessions.

Technical Proficiencies

Languages & Tools: C#, Angular, CSS3, NodeJS, Angular, Typescript, JavaScript, C++, Swift, Kotlin.

Database & Cloud: MSSQL, MySQL, SQLite, AWS, Google Cloud.

IDE & Tools: GIT, Visual Studio / Visual Studio Code, Postman, Android Studio, Xcode.

Professional Experience

Senior Software Developer (Promoted to Senior), Cotality (formally CoreLogic), Toronto, ON **July 2025 – Present**

Drives end-to-end delivery of high-priority initiatives within a complex insurance platform, balancing concurrent projects while ensuring quality and timely execution. Provides technical leadership through hands-on development, code reviews, and mentorship of junior engineers, and contributes to technical hiring efforts. Assumes ownership during project transitions to maintain delivery momentum. Rapidly adapts to new technologies, including learning Swift under tight timelines to deliver business-critical solutions, and partners with stakeholders to resolve client-facing production issues to ensure system stability.

- ♦ Assumed full ownership of a critical project after developer transition, ensuring uninterrupted delivery while managing parallel development responsibilities.
- ♦ Conduct structured code reviews and mentor junior developers to improve code quality, maintainability, and team capability.
- ♦ Participated in technical interviews and candidate evaluations to support team growth and hiring decisions.
- ♦ Quickly learned and implemented Swift to deliver a high-priority initiative within aggressive timelines.
- ♦ Investigated and resolved production issues in collaboration with clients and cross-functional teams, driving root-cause fixes and system reliability.

Software Developer, Cotality (formally CoreLogic), Toronto, ON **Feb 2021 – Jul 2025**

Review existing Insurance application, outline key areas of improvement, and implement modifications to the application to include new features and enhance application performance. Facilitate peer developers by conducting Code Reviews and leveraging technical expertise. Act as sprint master as well as organize daily standups, bi-weekly planning to ensure adherence to project requirements and deliverables. Oversee front and back-end to Database development of the respective project (LINK 2.0) and new feature (Claim Total). Support professional / talent development by educating new hires on software development process.

- ♦ Lead the development team of 4 for new feature (Claim Total) – everything from front to backend to Database.
- ♦ Upgraded the existing Angular Forms from untyped forms to new typed forms after Angular v14 update.
- ♦ Modified and upgraded old Insured AngularJS app to new Angular 11 (LINK 2.0).

- Optimized existing Insurance application by including new features for time zone abbreviation support.

Software Developer, LoadLink Technologies, Mississauga, ON **Aug 2020 – Feb 2021**

Upgraded Link Dispatch Flagship product from old Windows form (.net MVC/C#) to Angular 10 and .NET Core API application, along with managing various frontend development activities for Angular. Studied client requirements to generate architectural designs for angular frontend. Conducted integrations with third-party libraries, including ag-grid, angular material, chart.Js, and API.

- Enabled 75%+ code coverage and 90+ unit tests by utilizing Jasmine and Karma.
- Championed new product launch that increased subscriptions by 10% and decreased customer production errors by 15%.
- Applied agile methodologies with Bi-weekly sprints and regular standups as well as implemented Azure DevOps with CI/CD pipeline integrations resulting in smooth project development and delivery.

Software Developer, BELL CANADA, Mississauga, ON **July 2019 – July 2020**

Procured and addressed software and application development needs of other departments in collaboration with software team. Coordinated with hardware team to manage inventory, address UPS Battery Tracking system issues, and improve HR Recruiting app. Applied automation scripts and HTML / JSON Parsers to ensure effective data collection and cleaning.

- Introduced new features in eBay app that ensured better accessibility and functionality.
- Created full stack software for GIS team members that automated geocoding process and saved time.

Education

Advanced Diploma in Software Engineering Technology, Centennial College, Scarborough, ON, 2018
